

ABHISHEK M

LINUX ADMINISTRATOR | AWS | DEVOPS

Chickballapur, Karnataka | 8660042994 | abhishekgowdru.m@gmail.com | linkedin.com/in/abhishek-mcloud | github.com/abhishekgowdru

PROFESSIONAL SUMMARY

Motivated and detail-oriented Cloud and DevOps Engineer with a strong foundation in AWS cloud infrastructure, containerization, orchestration, infrastructure as code, and CI/CD automation.

Skilled in designing secure, scalable, and highly available cloud environments. Eager to apply hands-on project experience and certifications to contribute to a fast-paced DevOps team.

TECHNICAL SKILLS

DevOps Tools: Git, Docker, Kubernetes, Terraform, Ansible, Jenkins, Linux

Cloud Platform: Amazon Web Services (AWS)

Compute & Networking: EC2, VPC, Subnet, NAT Gateway, Transit Gateway, VPC Peering, Security Group, Network ACL (NACL), Elastic Load Balancing (ALB, NLB), Auto Scaling, Route 53

Storage & Database: S3, EFS, EC2 Snapshot, EBS, RDS, DynamoDB, AWS Backup

Security & Identity: IAM, Security Hub, GuardDuty, Inspector, AWS Config, WAF, Shield

Monitoring & Governance: CloudWatch, CloudTrail, AWS Config

Content Delivery & Serverless: CloudFront, Lambda

PROJECTS

- **Deployed 3-Tier Web Application on AWS**

This project demonstrates the deployment of a three-tier web application using Kubernetes on AWS EKS.

It involves containerization, Kubernetes orchestration, and deployment of application components in a scalable cloud environment.

The project showcases practical DevOps practices such as CI/CD, cloud infrastructure management, and automated application deployment.

- **CI/CD Pipeline with Containerized Microservices**

Built an automated CI/CD pipeline using Jenkins and Git to containerize applications with Docker and orchestrate deployments using Kubernetes. Used Ansible for configuration management and Terraform to provision AWS infrastructure as code; monitored performance and audited activity with CloudWatch and CloudTrail.

- **AI-Powered AWS AIOps Monitoring & Automated Incident Management**

Developed an AI-powered AWS AIOps platform using CloudWatch, Python, Scikit-learn, Docker, and Kubernetes to monitor infrastructure and application telemetry, detect anomalies, and identify recurring incidents. Automated log analysis, incident classification, root-cause insights, and remediation workflows, improving observability, reducing manual troubleshooting, and accelerating incident response and recovery. This project's main motto is to reduce the Mean Time To Repair (MTTR).

PROFESSIONAL EXPERIENCE

BDreamz Global Solutions Private Limited - DevOps / AWS Intern

Hands-on internship focused on Linux system administration, AWS cloud infrastructure, DevOps tools, automation, and deployment practices.

- Worked with Linux environments for user and permission management, SSH access, package installation, services, processes, file systems, and basic system troubleshooting.
- Worked with AWS services including EC2, VPC, S3, IAM, security groups, and CloudWatch for cloud infrastructure and monitoring.
- Used Git, Docker, Jenkins, Ansible, and Terraform in DevOps workflows for source control, containerization, CI/CD, configuration management, and Infrastructure as Code.
- Assisted with deployment automation, troubleshooting application and infrastructure issues, and maintaining reliable Linux-based environments.

EDUCATION

S.J.C. Institute of Technology — Bachelor of Engineering, Information Science and Engineering | 2022–2026

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- Cloud & Devops – Besant Technologies (hebbal)

ADDITIONAL INFORMATION

Core Strengths: Problem Solving, Troubleshooting, Team Collaboration, Communication, Adaptability
